Software Engineering student at York University with three internships and a self founded dispatch platform, Routy, shipped end to end. Builds production mobile and full stack systems with Flutter, React, Spring Boot, and Firebase, and owns features from design through CI/CD deployment.

TECHNICAL SKILLS

Languages: Java, JavaScript, Dart, SQL, Verilog, HTML/CSS

Backend: Spring Boot, REST APIs, JWT Authentication, Firebase (Firestore, Cloud Functions, Auth), MySQL

Frontend and Mobile: React, Flutter, Provider, Riverpod, Responsive Web Design

DevOps and Tools: Docker, GitHub Actions, CI/CD, Git, Linux, Vercel, Firebase Hosting, Postman, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Developer Intern | Superstars

May 2026 to Present

- Ship production features for the Superstars professional networking app on iOS and Android using Flutter and Dart, integrating the mobile client with backend services through REST APIs.
- Contribute to weekly sprints and product strategy discussions, helping shape roadmap priorities and platform improvements alongside the founding team.

Founder | Routy

Apr 2026 to Present

- Founded a dispatch and field coordination platform where dispatchers assign the nearest available worker from a live map and workers receive a push notification, navigate, and close the job in seconds.
- Architected and built the entire stack solo: Spring Boot backend, React dispatcher dashboard, Flutter mobile app, and a DE10 Lite FPGA hardware console linked through a custom UART byte protocol at 9600 baud.
- Programmed 8 Verilog modules including a 4 state dispatch FSM, UART TX/RX, hardware debouncers, a VGA status display, and a buzzer alarm driver.
- Driving go to market across HVAC, plumbing, locksmith, and security teams while growing the early access waitlist (routy.ca).

Software Engineering Intern | CetMatrix

Sept to Dec 2025

- Built and shipped cross platform Flutter apps, owning state management with Provider and Riverpod across the full widget life cycle.
- Owned the Firebase backend end to end, including Firestore schema design, Cloud Functions for asynchronous event processing, and Firebase Auth for user management.
- Automated testing and deployment for web and mobile with GitHub Actions CI/CD pipelines, eliminating every manual deploy step.
- Built internal analytics tools on Cloud Functions and social media APIs, replacing a full weekly manual reporting process.

IT Infrastructure Intern | CARE Hospitals

Sept to Dec 2025

- Maintained medical databases and workstations at 99.9% uptime in a high volume hospital environment handling sensitive patient data.
- Resolved support tickets within SLA windows and documented web portal bottlenecks to guide infrastructure fixes.

EDUCATION

Bachelor of Engineering, Software Engineering | York University, Lassonde School of Engineering

Expected 2027

Relevant courses: Operating Systems, Computer Networks, Data Structures and Algorithms, Advanced Object Oriented Programming, Building E-Commerce Systems, Digital Systems Engineering
